

Ideation Phase

Empathize & Discover

Date	28 June 2026
Student ID	23A51A05M5
Project Name	Employee ID Card Request
Maximum Marks	4 Marks

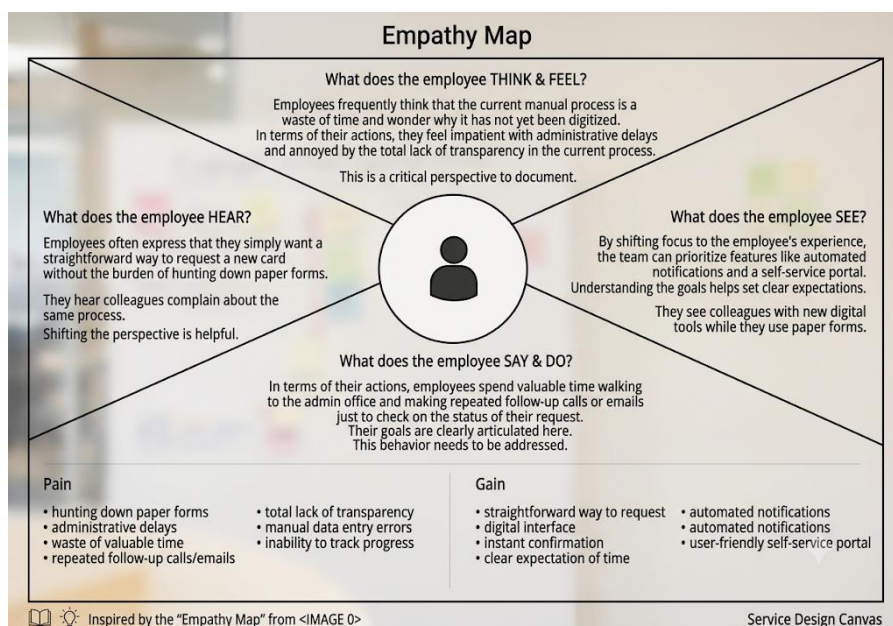

Empathy Map Canvas:

The Empathy Map for the Employee ID Card Request project serves as a vital tool to help the team understand the user's behaviors and attitudes. Creating this map allows participants to consider the experience from the employee's perspective, focusing on their goals and the specific challenges they encounter.

Regarding the user experience, employees often express that they simply want a straightforward way to request a new card without the burden of hunting down paper forms. They frequently think that the current manual process is a waste of time and wonder why it has not yet been digitized. In terms of their actions, employees spend valuable time walking to the admin office and making repeated follow-up calls or emails just to check on the status of their request. Ultimately, they feel impatient with administrative delays and annoyed by the total lack of transparency in the current process.

By focusing on these insights, it becomes clear that the primary goals are to submit requests quickly, receive instant confirmation, and have a clear expectation of when the new card will be ready. The main challenges identified are the lack of a digital interface, the potential for manual data entry errors, and the inability to track progress in real-time. By shifting the perspective to the employee's actual experience, the team can successfully prioritize features such as automated notifications and a user-friendly self-service portal to resolve these pain points.
